Wind can pose a major threat to the integrity of solar panels. Understanding the common types of damage caused by wind can help homeowners plan for prevention and maintenance. One of ...

Policyholders most often report lightning, wind, or hail as the cause of loss for solar panels included in claims. Of the three, only one remained as a top cause of loss after a comprehensive damage ...

The weakest link for the wind resistance of a solar panel system is rarely the panels themselves - in most instances where wind causes damage to a solar array, failures occur due to ...

Although your solar panels are highly unlikely to blow off your roof, there is some possibility that strong winds could cause objects to fly onto the panels. But for the damage to be ...

As climate change intensifies, solar power plants are increasingly exposed to high-wind events that can severely damage photovoltaic (PV) panels, solar trackers, and heliostats.

Solar panels can withstand 120 MPH hurricane speed winds, but it's always good to have insurance.

Solar energy technologies and power plants do not produce air pollution or greenhouse gases when operating. Using solar energy can have a positive, indirect effect on the environment when solar ...

Casualty insurance protects against liability for bodily injury or property damage to others, for example, caused by the PV system, such as by wind-liberated solar panels or fire caused by a problem with ...

Seals and adhesives can harden and weaken and allow water to infiltrate the solar panel, negatively affecting their ability to generate current (essentially rendering them useless). Airborne...

Wind damage is especially common, and if your panels aren't securely mounted, they could be ripped right off

Who is responsible if photovoltaic panels are damaged by wind

your roof. Learn more about wind damage claims and how to protect your investment.
