2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax credits and imposed new restrictions, ...

In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power generation over the next ...

The Energy Information Administration expects solar generation to grow from 163 billion kWh in 2023 to 286 billion kWh in 2025.

Electricity generation by the U.S. electric power sector totaled about 4,260 billion kilowatthours (BkWh) in 2025. In our latest Short-Term Energy Outlook (STEO), we expect U.S. ...

Globally, renewable power capacity is projected to increase almost 4 600 GW between 2025 and 2030 - double the deployment of the previous five years (2019-2024). Growth in utility-scale and distributed ...

According to the International Energy Agency (IEA), solar power will account for over 30% of global electricity generation by 2050, reinforcing the shift towards a solar-powered future.

The U.S. Energy Information Administration predicts solar energy will be the leading force behind this year's growth in the electric power industry.

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine. Is solar power going to take...

According to the latest Short-Term Energy Outlook from the U.S. Energy Information Administration (EIA), solar power generation in the U.S. is projected to skyrocket by 75% from 163 ...

Will solar power be generated after 5 billion

Electricity generation from solar, measured in terawatt-hours.
